**Chappaqua, NY 10514 (US)**

(54) **System for selecting, accessing, and viewing portions of an information stream(s) using a television companion device**

(57) A television companion device (TCD) is a device comprising a communication transceiver capable of receiving a signal from a television set, the signal having one or more types of information split from a broadcast signal received by the television set and an output that presents one or more segments of one or more of the types of information. This device enables the personal viewing of information selected specifically for the individual. This information can be different than and/or

unrelated to that displayed on the television. The information displayed on each individual TCD may be video clips or video programs, audio clips or audio programs, data, graphical images, still images, and/or animations. The device may also comprise an input that sends one or more messages through the communication transceiver to the television, thereby allowing the viewer to send requests for information to the television or send messages to other television companion devices.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 30 2922

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
